

## Appendix B: Site List

Project Year	Site	Address/Location	# of Basins	# of Trees/Shrubs	Notes
2012	Attubury Wash	Lincoln Park (Southeast Tucson, near Escalante & Pantano)	5	50	C2E has agreed to fund Tucson Audubon to install rainwater harvesting basins, native plants and associated materials in a part of Lincoln Regional Park near the Attubury Wash trailhead—an area with high visibility to visitors. Tucson Parks and Recreation Department has agreed to let us use that area. Tucson Audubon will be the point of contact with Parks and Recreation for this project.
2015	Feldmans Neighborhood	N 1st Ave, from E Lee St to E Helen St	16 with 7 curb inlets	93 shrubs 15 trees	Mead Mier was co-manager but has moved out of the neighborhood in 2017. Feldman's Google files list the contact for each of the stewards who adopted a curb cut in the neighborhood.
2013	Henry Elementary	650 N Igo Way	6	>12	Henry PTA and/or neighbors plan to adopt public portions of the project for maintenance and monitoring via Tucson Clean & Beautiful Adopt-a-Park & Public Areas program. Ongoing monitoring at least twice monthly, continued volunteer projects approximately quarterly, and informal neighborhood/family volunteer efforts. Principal works with the school district on campus maintenance issues. Project design intended to be low-maintenance for the long term.
2014	Jefferson Park NA	N Vine Ave, S of E Seneca St	4 with curb inlets	3 native trees 8 native plants/shrubs	JPNA's Green Committee will work with the homeowners to ensure that plants survive and that maintenance is done on the site. This has been a successful approach for our other basins.
2013	Mitchell Park	1100 E Mitchell St	2	9	The project sustainability plan will ensure community engagement in part, through continual awareness of the project, as we continue to hold our monthly Neighborhood Association meetings in the park within the project area. Our Neighborhood Association will work with Parks and Recreation in a cooperative manner to address maintenance issues including watering necessary to establish new plantings and annual cleaning of the water-harvesting basins and other issues as they may come forward. The Mtn/1st N.A. has been a long-term participant in Tucson's Clean and Beautiful Adopt-a Park program wherein several dedicated neighbors patrol and pick up litter on a daily basis. Our track record in taking care of Mitchell park has been well demonstrated. Educational signage describing the project and the C2E program will educate our park visitors such that our neighborhood community will become more informed, connected, and resilient.
2013	Northwest/El Cortez NA	1st Ave/Seneca	7	8	Northwest Neighborhood has already implemented a successful project maintenance model for the pocket park located at the corner of Sixth Avenue and Linden Street. A Group of volunteers created a supplementary watering schedule to share the burden of caring for the new plants. Email communication helped volunteers decide when to postpone watering after storms. Neighbors also continue to hold small cleanup and pruning days for the pocket park every few months, as needed. A similar model can be implemented for the First and Seneca project and carried forward through neighborhood meetings and email. jameskrepps@gmail.com, is no longer the active contact.
2014	Palo Verde NA	3345 E Willard St	6	24 native trees 40 shrubs	For over six years, PVNA volunteers have overseen maintenance of all Back-2-Basics and Reinvestment funded projects : roundabouts, speed tables, Neighborhood Leadership Project in conjunction with WMG at Catalina HS and storm water retention basins along Camilla Blvd, a joint effort with PVNA, WMG and ProNeighborhoods. A resident certified arborist provides volunteer tree maintenance. These volunteer services will be expanded to include the B-54 Wellsite project. Adjacent neighbors will be recruited for the on-going 'eyes and ears' of the project.
2014	Silverlake Park	2420 South Kino Pkwy			Tucson Audubon, park neighbors, and Parks and Recreation Department maintenance personnel will enter into a relationship as a team to manage this reach of 18th Street Wash. All will assist in the development of maintenance strategies that maximize shade and wildlife value while remaining consistent with the park's design and mandates. We believe that through the Adopt-A-Park program students and neighbors will have an ongoing connection with the site creating a relationship that can extend beyond the term of the grant.
2015	Sky Island High School	6000 E 14th St
